INT Intertubi

La costante crescita, la capacità organizzativa e la soddisfazione dei clienti hanno portato, nel corso degli anni, a orientare gli investimenti in tre aree fondamentali:

- **Produzione** di raccordi a saldare in acciaio inossidabile e al carbonio con inserimento di attrezzature all'avanguardia. Grazie a questo impegno l'azienda ha ottenuto approvazioni e certificazioni di Qualità quali:
 - **EN ISO 9001:2008** con il seguente campo di applicazione "Fabbricazione di raccordi a saldare in acciaio e carbonio, legato ed inossidabile con dimensioni comprese tra 1/4" e 32"." "Commercializzazione ed immagazzinamento di raccordi, flange, valvole e tubi di tutti i tipi di materiali ferrosi e non ferrosi".
 - **AD 2000-Merkblatt WO** per i materiali prodotti e utilizzati, che supporta i requisiti dell'allegato I par. 4.3 della Direttiva **PED 97/23CE**.
- **Controllo Qualità** dei prodotti con realizzazione di aree dedicate alle fasi di collaudo;
- **Sicurezza sul Lavoro** ammodernamento e miglioramento continuo di misure di prevenzione e protezione per la tutela dei lavoratori all'interno dell'Azienda.

La programmazione del magazzino e della produzione attraverso sofisticati sistemi di gestione, come l'utilizzo di codici a barre, permette le operazioni di carico e scarico del materiale in tempo reale, garantendo la possibilità per i clienti, tramite il sito internet, di **verificare giacenze, effettuare ordini e stampare certificati di qualità dei prodotti**.

Over the years, our constant growth, our organizational skills and our customer satisfaction have led us, to Focus our investment on three key areas:

- **Production** of stainless steel and carbon steel welding fittings with the addition of avant-garde equipment. Thanks to this efforts the firm has got approvals and Quality certifications:
 - **EN ISO 9001:2008** in the following field of application "Manufacture of carbon, alloy and stainless fittings dimensional range 1/4" to 32"." "Trade and storage of joints, flanges, valves and pipes of all types of materials, ferrous and non-ferrous".
 - **AD 2000-Merkblatt WO** for materials produced and used, which abined by the requirements for Annex I par. 4.3 of the Directive PED 97/23/CE.
- **Quality Control** of the products with reimplementation testing phase
- **Occupational Safety** on modernization and continuous improvement of prevention and protection measures for the protection of workers within the company.

The planning of the warehouse and the production through sophisticated management systems, such as the use of bar codes, allows for the operations of loading and unloading of the goods in real time.

*It also allows customers to **check inventory, place orders and print certificates of product quality** on the website.*

Questa moderna impostazione della produzione e dei criteri di stoccaggio consente:

- **Maggiore flessibilità** nella gestione, garantendo una più ampia differenziazione dei prodotti e dei materiali impiegati.
- **Competitività** nella fase di produzione per specifiche esigenze dei clienti per forniture di materiale in diversi gradi d'acciaio o con requisiti particolari.
- **Competenza** nella gestione di ordini complessi, quali quelli destinati a particolari gare, progetti o export.

INTERTUBI fornisce una gamma di articoli destinati all'impiantistica industriale di vari settori:

A) Impianti con basse pressioni d'esercizio e in presenza di agenti scarsamente o mediamente corrosivi, quali ad esempio il settore acqua, depurazione, tessile, conciario, cartiera, alimentare, farmaceutico, etc.

B) Impianti con pressioni d'esercizio elevate, e/o in presenza di agenti altamente corrosivi, o comunque con condizioni critiche nel rapporto pressione/ temperatura quali ad esempio il settore petrolifero, chimico, oleodinamico, navale, etc.

The up-to-date of the production settings and the stocking criteria allow to:

- **Greater flexibility** in the management, ensuring a wider differentiation of products and materials.
- **Competitiveness** in the production phase in order meet the different needs of the customers to supply material in different steel grades or with special requirements.
- **Proficiency** in managing elaborated orders designed for tender notices, proposals and export sales.

INTERTUBI provides a range of articles for industrial plant engineering in a variety of sectors:

A) Systems with low working pressure and with agents of low to average corrosivity, such as water, purification, textile, tanning, papermaking, food industry, pharmaceutical, etc

B) Systems with high working pressure, and or with highly corrosive agents or with critical conditions in the pressure/ temperature ratio, such as oil, chemical, oil-pressure, naval sector.

INTERTUBI S.p.A. produce e commercializza raccordi secondo le seguenti norme europee e americane:

Norme europee

EUROPEA EN 10253-1 - La norma EN 10253-1 tratta raccordi in acciaio al carbonio non legato lavorato plasticamente per impieghi generali, senza requisiti specifici di controllo (non conforme alle PED). Da parte del fabbricante dei raccordi dovranno essere rilasciati i certificati d'officina EN 10204/2.2

EUROPEA EN 10253-2 - La norma EN 10253-2 tratta raccordi in acciaio al carbonio legato e non legato con requisiti specifici di controllo per impieghi a pressione (conforme alla PED). Da parte del fabbricante dei raccordi dovranno essere rilasciati i certificati d'officina EN 10204/3.1.

EUROPEA EN 10253-3 - La norma EN 10253-3 tratta raccordi in acciaio inossidabile per impieghi senza requisiti specifici di controllo (non conformi alla PED). Da parte del fabbricante dei raccordi dovranno essere rilasciati i certificati d'officina EN 10204/2.2.

EUROPEA EN 10253-4 - La norma EN 10253-4 entrata in vigore in Italia nel Maggio 2008, tratta raccordi a saldare in acciaio inossidabile con requisiti specifici di controllo per impieghi a pressione (conformi alla PED). Da parte del fabbricante dei raccordi dovranno essere rilasciati certificati d'officina EN 10204/3.1 o 3.2.

EUROPEA EN 1092-1 - La norma EN 1092-1, definisce i requisiti riguardanti le flange, specificando i tipi, le dimensioni, le tolleranze, la marcatura, i materiali, le relazioni di pressione/temperatura e la finitura superficiale.

DIRETTIVA PED (97/23/CE) - L'applicazione della direttiva PED (97/23/CE) è obbligatoria per tutte le apparecchiature in pressione (es. caldaie, scambiatori di calore). In base alla Direttiva Europea, entrata in vigore il 29 maggio 2002, il produttore di raccordi deve disporre di un Sistema di Qualità operante secondo la ISO 9001 e certificato, sulle basi di una valutazione specifica per i materiali prodotti, da un organo competente riconosciuto all'interno della Comunità Europea.

INTERTUBI S.p.A. produces and markets fittings in accordance with the following European and American standards:

European standards

EUROPEAN EN 10253-1 - Standard EN 10253-1 deals with wrought non alloy carbon steel fittings for general use and without specific inspection requirements (not according to PED). The manufacturer must provide inspection certificates EN 10204/2.2.

EUROPEAN EN 10253-2 - Standard EN 10253-2 deals with alloy and non alloy carbon steel fittings and not alloy with specific inspection requirements for pressure uses (according to PED). The manufacturer must provide inspection certificates EN 10204/3.1 or 3.2.

EUROPEAN EN 10253-3 - Standard EN 10253-3 deals with stainless steel fittings without specific inspection requirements (not according to PED). The manufacturer must provide release inspection certificates EN 10204/2.2.

EUROPEAN EN 10253-4 - Standard EN 10253-4 came into force in Italy in May 2008. It deals with stainless steel fittings with specific inspection requirements for pressure uses (according to PED). The manufacturer must provide inspection certificates EN 10204/3.1 or 3.2.

EUROPEAN EN 1092-1 - Standard EN 1092-1 defines the requirements regarding flanges, specifying types, dimensions, tolerances, markings, materials, pressure/temperature ratios and the surface finish.

DIRECTIVE PED (97/23/CE) - The application of PED directive (97/23/EU) is compulsory for all pressure equipments (for ex. boilers, heat exchangers). In accordance with EU Directive, it came into force on 29 May 2002, the manufacturer of fittings must have a Quality System operating according to ISO 9001 and certified, by on the basis of a specific evaluation for material produced, recognized by an official authority within the EU.

Norme americane

AMERICANA ASME B16.9 - Lo scopo di questa norma, appartenente alla raccolta di norme BPVC ("Boiler and pressure vessel code") per recipienti in pressione, è quello di definire dimensioni, tolleranze, prove di scoppio, controlli e marcature per raccordi a saldare di testa nelle dimensioni da 1/2 pollici fino a 48 pollici. Esistono differenti norme che definiscono i materiali e le loro proprietà meccaniche per i raccordi a saldare di testa. All'interno di tali norme, la sezione della fabbricazione fa riferimento alla norma ASME B16.9.

AMERICANA ASME B16.5 - Definisce le dimensioni, tolleranze, prove, controlli e marcatura per le flange a saldare.

American standards

AMERICAN ASME B16.9 - The purpose of this standard, which comes under BPVC (Boiler and Pressure Vessel Code) regulation on pressure equipment, is to define dimensions, tolerances, burst tests, inspections and markings for butt welding fittings in size from 1/2" to 48". There are several standards which define the materials and their mechanical properties for butt welding fittings. Under these standards, the manufacturing sector to which we refer, is governed by ASME B16.9.

AMERICAN ASME B16.5 - It defines dimensions, tolerances, tests, controls and marking for welding flanges.

CERTIFICATO

I prodotti forniti da Intertubi sono accompagnati da documenti di controllo, in accordo alla norma EN 10204. I tipi di documenti sono:

CERTIFICATO 2.1

Documento rilasciato dal fabbricante in cui si dichiara che i prodotti forniti sono conformi all'ordine, senza inclusione dei risultati di prova.

CERTIFICATO 2.2

Documento in cui il fabbricante dichiara che i prodotti sono forniti conformi all'ordine fornendo i risultati di prova basati sulla non specifica ispezione.

CERTIFICATO 3.1

Documento rilasciato dal fabbricante in cui si dichiara che i prodotti forniti sono conformi all'ordine.

Il certificato convalidato dal rappresentante autorizzato del produttore (indipendente dalla produzione), riportante i risultati di prova basati sulla specifica ispezione, è fornito a condizione che il fabbricante utilizzi procedure di rintracciabilità e sia in grado di fornire i documenti di controllo richiesti.

CERTIFICATO 3.2

Documento rilasciato dal fabbricante in cui si dichiara che i prodotti forniti sono conformi all'ordine. Il certificato convalidato dal rappresentante del produttore (indipendente dalla produzione) e da ispettori autorizzati designati da regolamenti ufficiali, riportante i risultati di prova basati sulla specifica ispezione, è fornito a condizione che il fabbricante utilizzi procedure di rintracciabilità e sia in grado di fornire i documenti di controllo richiesti.

All our materials are supplied complete with inspection documents, depending on the products required and according to EN 10204 regulation. Types of inspection documents:

CERTIFICATE 2.1

Inspection certificate issued by the manufacturer stating that the products supplied are in compliance with the order, without inclusion of test results.

CERTIFICATE 2.2

Inspection certificate in which the manufacturer declare that the products are in compliance with the order providing the test results based on non- specific inspection.

CERTIFICATE 3.1

Inspection certificate in which the manufacturer declares that the products are in compliance with the order.

The document is validated by the manufacture's authorized inspection representative, independent of the manufacturing department. This certificate provides the results of specific inspection, and it is produced on condition that the manufactures uses tracking procedures and provide the requested inspection documents.

CERTIFICATE 3.2

Inspection certificate in which the manufacturer declares that the products supplied are in compliance with the order providing the test results based on specific inspection, validated by an authorized representative, by the manufacturer, (independent of production), and by the authorized inspector designated by the official regulations, the manufacturer uses procedures of tracking and able to provide the requested inspection documents.

TIPI DI ACCIAIO

Per acciai inossidabili si intendono quelle leghe a base di ferro, cromo e carbonio, eventualmente contenenti altri elementi come Ni, Mo, Si, ecc. la cui caratteristica principale è la resistenza alla corrosione.

Tale caratteristica è dovuta alla loro proprietà di passivarsi in presenza di un ambiente ossidante (quindi anche all'aria). La passivazione consiste nella formazione di uno strato invisibile di ossido (variabile in funzione della composizione chimica dell'acciaio, del trattamento termico e del tipo di ambiente ossidante) che costituisce una barriera al proseguimento dell'ossidazione e quindi della corrosione e che, in caso asportazione, si riforma spontaneamente.

Le classi in cui si dividono:

- Acciai Austenitici
- Acciai Martensitici
- Acciai Ferritici
- Acciai Duplex / Super Duplex

ACCIAI AUSTENITICI - Sono acciai inossidabili che contengono Cr (16-20%), Ni (7-18%) ed in alcuni tipi Mo (2-6%) con un tenore di carbonio di solito inferiore a 0,08%; la presenza di elementi stabilizzanti, Ti per esempio, migliora ulteriormente la resistenza alla corrosione, in particolare quella intergranulare, e contemporaneamente dà una maggior resistenza ad alta temperatura.

ACCIAI MARTENSITICI - Sono acciai al solo cromo (11% - 18%) contenenti eventualmente piccole quantità di altri elementi. Caratteristica fondamentale di questi acciai è l'attitudine a migliorare le loro proprietà meccaniche mediante un trattamento termico di tempra e di rinvenimento.

ACCIAI FERRITICI - Sono acciai contenenti cromo (12-27%) e carbonio generalmente $\leq 0,20\%$ con eventuali piccole aggiunte di altri elementi.

La loro caratteristica principale è di avere una struttura ferritica a qualsiasi temperatura e quindi di non essere suscettibili di aumento delle caratteristiche meccaniche mediante trattamenti termici.

ACCIAI DUPLEX / SUPER DUPLEX - Il termine Duplex deriva dal fatto che il materiale ha una microstruttura a due fasi, formata da grani di acciaio inox ferritico e austenitico

TYPES OF STEEL

Stainless steels are iron, chromium and carbon based alloys that may contain other elements such as Ni, Mo, Si, etc, whose main characteristic is their resistance to corrosion.

This characteristic is due to the passivation property of these steels in the presence of an oxidizing environment (therefore also in air). Passivation consists in the formation of an invisible layer of oxide, which varies according to the chemical composition of the steel, the type of heat treatment and the type of oxidizing environment which forms a protective barrier to continuation of oxidation and therefore corrosion, and which is rectified immediately if removed.

The grades of stainless steels are:

- Austenitic Steels
- Martensitic steels
- Ferritic steels
- Duplex / Super Duplex Steels

AUSTENITIC STEELS - Contain Cr (16-20%), Ni (7-18%) and in some types Mo (2-6%) with a carbon content that is usually less than 0.08%; the presence of stabilizing elements, such as Ti, further improves their resistance to corrosion, particularly intergranular corrosion, combined with greater resistance to high temperatures.

MARTENSITIC STEELS - These are basically plain chromium steels (11-18%) that may contain small quantities of other elements. The main characteristic of these steels is their ability to improve their mechanical properties through a hardening and tempering heat treatment.

FERRITIC STEELS - These are steels containing chromium (12-27%) and with a carbon content generally of 0.20% possibly with minor additions of other elements.

Their main characteristic is that they have a ferritic structure at any temperature and, therefore, their mechanical properties cannot be improved through heat treatments.

DUPLEX / SUPER DUPLEX STEELS - The term Duplex derives from the concept that they have a two-phase microstructure consisting of grains of both ferritic and austenitic stainless

incorporati nello stesso materiale. Il termine Super Duplex denota acciaio duplex ad alte prestazioni basato su un elevato contenuto di cromo, nichel e molibdeno per migliorare la resistenza alla corrosione.

CLASSIFICAZIONE DEGLI ACCIAI AL CARBONIO

Gli acciai da noi utilizzati, contemplati dalla norma di esecuzione per raccordi EN 10253-2, possono essere classificati secondo due modalità:

COMPOSIZIONE CHIMICA:

- ACCIAI AL CARBONIO: P235TR1, P235TR2, P235GH, P265GH, P265NL, P355NH, P355NL1, L290NB, L360NB, L360QB, L415NB, L415QB, L450QB.
- ACCIAI BASSO LEGATI, quando nella loro composizione chimica contengono elementi in lega (cromo, nichel, molibdeno, etc) in quantità inferiore al 5% sia come somma degli elementi, sia come valore singolo se contengono un solo elemento: 16Mo3, 13CrMo4-5.
- ACCIAI ALTO LEGATI, quando nella loro composizione chimica contengono elementi in lega (cromo, nichel, molibdeno, etc) in quantità superiore al 5% sia come somma degli elementi, sia come valore singolo se contengono un solo elemento: X11CrMo9-1, X11CrMoVNb9-1.

CONDIZIONI DI IMPIEGO:

- ACCIAI PER IMPIEGHI AL ALTE TEMPERATURE: P235GH, P265GH, 16Mo3, 13CrMo4-5, P355NH.
- ACCIAI PER IMPIEGHI A BASSE TEMPERATURE: P265NL, P355NL.
- ACCIAI AD ALTO SNERVAMENTO: L290NB, L360NB, L415QB, L450QB.

TRATTAMENTI TERMICI

Si definisce trattamento termico l'operazione, o la successione di operazioni nel caso di un trattamento complesso, durante la quale l'acciaio viene sottoposto ad uno o più cicli termici, cioè a variazioni entro limiti determinati della temperatura in funzione

steel within formulated in the same material. The term Super Duplex denotes highperformance Duplex steel based on elevated contents of chromium, nickel and molybdenum to improve pitting corrosion resistance.

CLASSIFICATION OF CARBON STEELS

The steels which we use as listed by EN 10253-2 standards, are classified in 2 ways:

CHEMICAL COMPOSITION:

- CARBON STEELS: P235TR1, P235TR2, P235GH, P265GH, P265NL, P355NH, P355NL1, L290NB, L360NB, L360QB, L415NB, L415QB, L450QB.
- LOW ALLOY STEELS, when their alloy content (chrome, nickel, molybdenum, etc) is less than 5% whether as the sum of elements or as single value if only one element is present: 16Mo3, 13CrMo4-5.
- HIGH ALLOY STEELS, when their alloy content (chrome, nickel, molybdenum, etc) is greater than 5% whether as the sum of the elements or as single value if only one elements is present: X11CrMo9-1, X11CrMoVNb9-1.

APPLICATIONS:

- STEELS FOR USE AT HIGH TEMPERATURES: P235GH, P265GH, 16Mo3, 13CrMo4-5, P355NH.
- STEELS FOR USE AT LOW TEMPERATURES: P265NL, P355NL.
- HIGH-YIELD POINT STEELS: L290NB, L360NB, L415QB, L450QB.

HEAT TREATMENTS

Heat treatment is the operation (or series of operations in the case of complex treatments) during which one or more thermal cycles are carried out on the steel, i.e modifying the temperature within specific time limits. During a thermal

del tempo. Di norma un ciclo termico comporta un riscaldamento ad una data temperatura, un mantenimento per un certo tempo a questa temperatura ed infine un raffreddamento fino a temperatura ambiente con modalità diverse in relazione agli effetti desiderati.

NORMALIZZAZIONE - Consiste in un riscaldamento ad una temperatura superiore ad AC₃ (= temperatura alla quale, durante il riscaldamento, inizia la formazione di austenite), per un tempo sufficiente ad austenitizzare completamente il materiale, seguito da raffreddamento in aria calma o mossa. Viene generalmente eseguita su pezzi grezzi di lavorazione a caldo per affinare ed uniformare il grano allo scopo di predisporre l'acciaio nel modo migliore per i successivi trattamenti termici.

RICOTTURA - Lo scopo della ricottura è quello di addolcire l'acciaio per renderlo atto alle lavorazioni meccaniche e/o plastiche, di eliminare le tensioni residue e di distruggere gli effetti di una deformazione plastica, di una saldatura o di un trattamento termico precedente. Esistono vari cicli di ricottura, (subcritica, isoterma), la cui scelta fatta in relazione alla durezza ed alle strutture necessarie per un determinato tipo di lavorazione.

TEMPRA - Il trattamento tempra comprende un riscaldamento di austenitizzazione, seguito da un raffreddamento fino ad una temperatura inferiore ad MS (= temperatura alla quale, durante il raffreddamento, inizia la trasformazione dell'austenite in martensite) sufficientemente rapido da permettere la trasformazione in martensite, struttura di elevata durezza e fragilità.

RINVENIMENTO - Allo stato temprato l'acciaio presenta una elevata durezza e basse caratteristiche di tenacità. È necessario quindi ricorrere ad un successivo trattamento che ne modifichi più o meno profondamente la struttura martensitica di tempra annullandone le tensioni e la fragilità. Questo trattamento, denominato rinvenimento, comprende un riscaldamento ad una temperatura inferiore ad AC₁ (temperatura alla quale, durante il riscaldamento, l'austenite inizia a formarsi), un mantenimento per un certo tempo a questa temperatura ed infine un raffreddamento in un mezzo appropriato fino a temperatura ambiente.

SOLUBILIZZAZIONE - Consiste in un riscaldamento a temperatura in genere compresa fra i 1000 e i 1100°C, con una permanenza a questa temperatura sufficiente per eliminare le alterazioni strutturali provocate dalle lavorazioni precedenti e per

cycle, the steel is usually heated to a certain temperature, held at this temperature for a certain time and then left to cool to room temperature in various ways according to the effects required.

NORMALIZING - *Normalizing consists in heating to a temperature above AC₃ (= temperature at which, during heating, transformation of the ferrite into austenite begin) for a to time sufficient allow complete austenization of the material followed by cooling in still or forced air. This process is usually carried out on hot worked rough parts in order to obtain a finer, more even grain so that the steel is in optimal conditions for subsequent heat treatments.*

ANNEALING - *The purpose of annealing is to soften the steel so that it is suitable for mechanical and/or plastic machining, to eliminate residual stresses and to eliminate the effects of plastic deformation, of welding or of a previous heat treatment. There are a number of used cycles (Sub critical, isothermal annealing), whose annealing cycles must be selected according to the hardness and structures required for a specific type of machining.*

HARDENING - *The hardening treatment includes austenitizing heating followed by cooling to a temperature below MS (= temperature at which, during cooling, transformation of the austenite into martensite starts) a speed which allows into martensite, a very hard brittle structure.*

TEMPERING - *When hardened, steel is characterized by a high level of hardness and a low level of toughness. A subsequent treatment is therefore required to produce a greater or lesser modification of the martensitic hardening structure, eliminating its stresses and brittleness. This treatment, known as tempering, involves heating to a temperature below AC₁, (= temperature at which, during heating, austenite starts) to form holding this temperature for a certain time and finally, cooling to room temperature in an appropriate container.*

SOLUTION ANNEALING - *This process consists in heating to a temperature usually between 1000 and 1100°C. The part is held at this temperature for a time sufficient to eliminate the structural alterations caused by previous machining and also*

realizzare una "solubilizzazione" possibilmente completa dei carburi nell'austenite; il raffreddamento successivo, in aria o acqua, deve essere superficialmente rapido da impedire la riprecipitazione dei carburi che, in un raffreddamento lento, avviene in genere nell'intervallo fra i 450 e gli 850°C circa. Con tale trattamento si ottiene il massimo addolcimento degli acciai inossidabili austenitici.

BONIFICA ISOTERMICA - La bonifica isometrica si esegue con riscaldamento alla normale temperatura di tempra seguito da rapido spegnimento in bagno di sali a temperatura sopra M_s di circa 10°-30° fino a completa trasformazione dell'austenite.

DISTENSIONE - Nel caso degli acciai da cementazione o autotempranti, per diminuire e possibilmente annullare le tensioni residue causate dalla tempra pur mantenendo elevati valori di durezza, si ricorre al trattamento di distensione che consiste in un riscaldamento a temperature inferiori ai 250°C. In questo caso non si hanno apprezzabili modifiche strutturali.

to obtain maximum complete if as possible "solubilization" of the carbides of the austenite; subsequent cooling, in air or water, must be fast enough to prevent reprecipitation of the carbides which, in the case of slow cooling, usually occurs in the range between approx. 450 and 850°C.

Maximum softening of austenitic stainless steels is obtained with this treatments.

AUSTEMPERING - *This treatment consists in heating to normal hardening temperature followed by fast quenching in a salt bath at a temperature of around 10°C - 30°C above M_s until complete transformation of the austenite.*

STRESS RELIEVING - *Stress relieving, which consists in heating to temperatures below 250°C, is used for casehardening or air-hardening steels in order to restrict and possibly eliminate residual hardening stresses while maintaining high level hardness. In this way, there are no appreciable modifications to the structure.*

INFORMAZIONI GENERALI
GENERAL INFORMATION

I raccordi a saldare ASME B16.9 sono forniti in accordo alle seguenti norme:

Intertubi's butt welding fittings are provided in according to the following standards:

Norma di raccordo <i>Fitting standard</i>	Norma <i>Standard</i>	Descrizione <i>Description</i>	Grado di acciaio <i>Steel grade</i>	Tipologia di raccordi / <i>Fittings types</i>
ASME B16.9	ASTM/ASME A/SA 234	Raccordi per tubazioni in acciaio al carbonio o basso-legato per impiego in pressione a media-alta temperatura. <i>Piping fittings of wrought carbon steel and alloy steel for moderate and high temperature service.</i>	Acciai al carbonio: WPB, WPC Acciai legati WP1, WPS(CL.1,3), WP9(CL.1,3), WP11(CL.1,2,3), WP12(CL.1,2) WP22(CL.1,3), WP91	Curve/Elbows (SR, LR, R=3D) Riduzioni concentriche/eccentriche <i>Concentric and eccentric reducer</i> Tee con derivazione uguale e ridotta <i>Equal reducing tee</i> Fondi/Caps
	ASTM/ASME A/SA 420	Raccordi per tubazione in acciaio al carbonio o basso-legato per impiego in pressione a bassa temperatura. <i>Piping fittings of wrought carbon steel and alloy steel for low-temperature service</i>	WPL6	--
MSS SP75	ASTM A 860	Raccordi a saldare di testa ad alto snervamento per il trasporto di fluidi combustibili. <i>Wrought high-strength ferritic steel butt-welding fittings.</i>	WPHY42, WPHY52, WPHY60, WPHY65, WPHY70	--

I raccordi vengono forniti con estremità smussate secondo ASME B16.25.

Fittings are supplied with beveled ends according to ASME B16.25.

Le tabelle riportate in seguito permettono un confronto tra i differenti gradi di acciaio secondo la composizione chimica e le proprietà meccaniche:

Tables shown below allow a comparison between the different steel grades according to the chemical composition and mechanical properties:

Grado / Grade		Composizione / Composition %							
Grade WP	C	Mn	P	S	Si	Ni	Cr	Mo	Others
WPB ^{B,C,D,E,F}	0.30 max	0.29 - 1.06	0.050	0.058	0.10 min	0.40 max	0.40 max	0.15 max	Vanadium 0.08 max
WPC ^{C,D,E,F}	0.35 max	0.29 - 1.06	0.050	0.058	0.10 min	0.40 max	0.40 max	0.15 max	Vanadium 0.08 max

WPL6	0.30 max	0.50 - 1.35	0.035	0.040	0.15 - 0.40	0.40 max	0.30	0.12	Vanadium 0.08
WPHY	0.20 max	1.00 - 1.45	0.030	0.010	0.15 - 0.40	0.50 max	0.30	0.25	Vanadium 0.10

NOTA 1 - Tutti i requisiti sono al massimo se non diversamente indicato.

NOTA 2 - Dove i puntini di sospensione (...) appare in questa tabella, non vi è alcun obbligo.

NOTA 1 - All requirements are maximum unless otherwise indicated.

NOTA 2 - Where an ellipsis (...) appears in this table, there is no requirement.

^A Quando raccordi sono di costruzione saldata, il simbolo di grado e la marcatura sopra indicato deve essere completata con la lettera "W".

^B Raccordi prodotti da barra o piastra può avere carbonio max 0,35.

^C Raccordi a base di forgiati può avere carbonio max 0,35 e 0,35 silicio max sempre minimo.

^D Per ogni riduzione dello 0,01% al di sotto del massimo di carbonio specificato, con un incremento del 0,06% manganese al di sopra del massimo specificato sarà consentito, fino ad un massimo di 1,35%.

^E La somma di rame, nichel, cromo, molibdeno e non supera 1,00%.

^F La somma di cromo e molibdeno non supera 0,32%.

^A When fittings are of welded construction, the grade and marking symbol shown above shall be supplemented by the letter "W".

^B Fittings made from bar or plate may have 0.35 max carbon.

^C Fittings made from forgings may have 0,35 max carbon and 0,35 max silicon with no minimum.

^D For each reduction of 0,01% below the specified carbon maximum, an increase of 0,06% manganese above the specified maximum will be permitted, up to a maximum of 1,35%.

^E The sum of Copper, Nickel, chromium, and Molybdenum shall not exceed 1,00%.

^F The sum of Chromium and Molybdenum shall not exceed 0,32%.

NOTE GENERALI / GENERAL NOTES

- (a) Tutte le dimensioni sono in millimetri / (a) All dimensions are in millimeters
- (b) Le tolleranze sono uguali più o meno eccetto le note / (b) Tolerances are equal plus and minus except as noted

NOTES

- (1) Il diametro interno e nominale della parete dello spessore alle estremità deve essere specificato dall'acquirente
(1) The inside diameter and the nominal wall thickness at ends are to be specified by the purchaser
- (2) Il minimo spessore della parete del 87,5% è applicato a meno che l'acquirente specifichi una differente tolleranza della parete dello spessore
(2) A minimum wall thickness of 87.5% is applied unless the purchaser specifies a different wall thickness tolerance
- (3) L'ovalità è la somma dei valori assoluti delle tolleranze minime e massime
(3) Out-of-round is the sum of absolute values of plus and minus tolerances
- (4) Questa tolleranza non può essere applicata ad aree localizzate dei raccordi formati dove è necessario un aumento per soddisfare i requisiti di progetto
(4) This tolerance may not be applied in localized areas of fittings formed where increased wall thickness is required to meet design requirements
- (5) Se non diversamente specificato dall'acquirente queste tolleranze applicate al diametro interno nominale, corrispondono alla differenza tra il diametro esterno nominale e il doppio spessore della parete nominale
(5) Unless otherwise specified by the purchaser, these tolerances applied to the nominal inside diameter, correspond to the difference between the nominal outside diameter and twice the nominal wall thickness

ACCIAIO AL CARBONIO | CARBON STEEL

RACCORDI A SALDARE EN 10253
BUTT WELDING FITTINGS EN 10253

**INFORMAZIONI GENERALI
GENERAL INFORMATION**

I raccordi a saldare di testa della società Intertubi sono forniti in accordo alle seguenti norme:
Intertubi's butt welding fittings are provided in according to the following standards:

Norma di raccordo Fitting standard	Descrizione Description	Norma del tubo Pipe standard		Grado di acciaio Steel grade	Tipologia di raccordi Fittings types
		Senza saldature Seamless	Saldato Welded		
EN 10253-1	Raccordi in acciaio non legato lavorato plasticamente per impieghi generali e senza requisiti specifici di controllo (certificato EN 10204/2.2) non in accordo PED. <i>Butt-welding pipe fittings wrought carbon steel for general use and without specific inspection requirements not according to PED.</i>	EN 10216-1 (P235TR1, P236TR1)	EN 10217-1 (P235TR1, P236TR1)	S235, S265	Curve (2D, 3D, 5D) Riduzioni concentriche (Forma 1) Riduzioni concentriche ed eccentriche Forma 2 Tee con derivazione uguale e ridotta Fondi bombati Elbows (2D, 3D, 5D) Concentric reducers (Form 1) Concentric and eccentric reducers (Form 2) Equal reducing tee Caps
EN 10253-2	Raccordi in acciaio non legato e legato con requisiti specifici di controllo per impieghi a pressione (certificato EN 10204/2.2) in accordo a PED. <i>Butt-welding pipe fittings non alloy and ferritic alloy steels with specific inspection requirements, according to PED.</i>	EN 10216-1	EN 10217-1	Acciaio al carbonio a temperatura ambiente P235TR2, P265TR2	Curve (2D, 3D, 5D) Riduzioni concentriche (Forma 1) Riduzioni concentriche ed eccentriche Forma 2 Tee con derivazione uguale e ridotta Fondi bombati Elbows (2D, 3D, 5D) Concentric reducers (Form 1) Concentric and eccentric reducers (Form 2) Equal reducing tee Caps
		EN 10216-2 (TC1 e TC2)	EN 10217-2 (TC1 e TC2)	Acciaio al carbonio per alta temperatura P235GH, P265GH	
		EN 10216-2 (TC2)	EN 10217-2 (TC2)	Acciai legati per alta temperatura 16Mo3, 13CrMo4-5, 100LvMo5-5, X10CrMoVn9-1	
		EN 10216-3/4 (TC1 e TC2)	EN 10217-3/4 (TC1 e TC2)	Acciaio al carbonio per basse temperature P265NL, P355NL	
		EN 10208-2		Acciai al carbonio per trasporto di fluidi combustibili (line pipe) L290NB, L360NB, L4150B, L4500B	

Le tabelle riportate in seguito permettono un confronto tra i differenti gradi di acciaio secondo la composizione chimica e le proprietà meccaniche:

Tables shown below allow a comparison between the different steel grades according to the chemical composition and mechanical properties:

S 235	0,16	0,35	1,2	0,025	0,030

Nota 1 - Gli elementi che non figurano nel presente prospetto non devono essere aggiunti intenzionalmente all'acciaio senza il consenso del committente, fatta eccezione per gli elementi utilizzati per la disossidazione dell'acciaio. Possono tuttavia essere tollerati elementi residui a condizione che le caratteristiche meccaniche e l'utilizzabilità del prodotto non vengano influenzati sfavorevolmente. Nota 2 Vedere appendice A per i particolari relativi al tipo di acciaio alternativo S265

Note 1 - The elements that don't show up in the present prospectus don't have to intentionally be assistant to the steel without the consent of the buyer, made exception for the elements used for the deoxidation of the steel. They are able nevertheless to be born elements condition residues that the mechanical characteristics and the usability of the product is not unfavorably influenced. Note 2 To see appendix A for the particular ones related to the type of alternative steel S265

**LE TOLLERANZE, COME DA PAR 11.2 E EN 10253-2, SONO RIEPILOGATE NELLA SEGUENTE TABELLA:
TOLERANCES, AS EXPLAINED IN PAR 11.2 E EN 10253-2, ARE SUMMARIZED IN THE FOLLOWING TABLE:**

Diametro esterno Outside diameter D (mm)	Diametro interno Inside diameter		Ovalità (2) Out of round		Spessore (3) Thickness	F-G-H-L (mm)	B (mm)	C (mm)	K (mm)
	Alle estremità At the ends	Sul corpo On the body	Alle estremità At the ends	Sul corpo On the body					
≤114,3	± 1% min ± 0,5 mm (classe D2)	Almeno 80% del diametro interno alle estremità At least 80% of the internal diameter at the ends	Inclusa nella tolleranza del diametro Included in the tolerance of the diameter	Max 4%	-12,5% +15%	±2mm	±7mm	±7mm	±4mm
>=139,7 <=219,1									±7mm
273									±10mm
>=323,9 <=406,4									±7mm
>=457 <=610									±10mm
>=660 <=762			±7mm						
>762			Max 2%	Senza saldatura Seamless -0,35 mm +15%	±5mm	±10mm	±10mm	±7mm	
					±10mm	±10mm	±10mm	±10mm	

(1) Le quote F-G-H-L-B-C-K sono riferite alle figure 1-2-3-4-5-6-7-8-9-10-11-12 della EN 10253-4.

(2) L'ovalità deve essere così calcolata $Ov=100(D_{max}-D_{min})/D$ in % dove:

D_{max} = diametro massimo misurato sulla sezione in mm

D_{min} = diametro minimo misurato sulla sezione in mm

D = diametro nominale della sezione in mm

(3) La tolleranza minima si applica anche sul corpo del raccordo

(1) Dimensions are F-G-H-L-B-C-K are referring to the figures 1-2-3-4-5-6-7-8-9-10-11-12 of EN 10253-4.

(2) The out of roundness must be so calculate: $Ov=100(D_{max}-D_{min})/D$ in % where:

D_{max} = maximum diameter measured on the section in mm

D_{min} = minimum diameter measured on the section in mm

D = nominal diameter of section in mm

(3) Minimum tolerance is applied also on the body of the fitting.

INFORMAZIONI GENERALI
GENERAL INFORMATION

I raccordi a saldare ASME B16.9 sono forniti in accordo alle seguenti norme:

Intertubi's butt welding fittings are provided in according to the following standards:

Norma di raccordo <i>Fitting standard</i>	Norma <i>Standard</i>	Descrizione <i>Description</i>	Grado di acciaio <i>Steel grade</i>	Tipologia di raccordi / <i>Fittings types</i>
ASME B16.9	ASTM/ASME A/SA 403	Specifiche standard di raccordi di tubazione in acciaio inox austenitici <i>Standard specification for piping fittings of stainless steel austenitic</i>	WP304/304L WP316/316L	Curve / Elbows Long / Short Radius Riduzioni concentriche ed eccentriche / <i>Concentric and eccentric reducers</i> Tee con derivazione uguale e ridotta / <i>Equal reducing tee</i> Fondi / <i>Caps</i> Stub - Ends Short Length

I raccordi vengono forniti con estremità smussate secondo ASME B16.25.

Fittings are supplied with beveled ends according to ASME B16.25.

Le tabelle riportate in seguito permettono un confronto tra i differenti gradi di acciaio secondo la composizione chimica e le proprietà meccaniche:

Tables shown below allow a comparison between the different steel grades according to the chemical composition and mechanical properties:

Grado / Grade		Composizione / Composition %						
Grade WP	C	Mn	P	S	Si	Ni	Cr	Mo
WP304	0.08	2.00	0.045	0.030	1.00	8.0 - 11.0	18.0 - 20.0	
WP304L	0.030	2.00	0.045	0.030	1.00	8.0 - 12.0	18.0 - 20.0	
WP316	0.08	2.00	0.045	0.030	1.00	10.0 - 14.0	16.0 - 18.0	2.00 - 3.00
WP316L	0.030	2.00	0.045	0.030	1.00	10.0 - 14.0	16.0 - 18.0	2.00 - 3.00

NOTA 1 - Tutti i requisiti sono al massimo se non diversamente indicato.

NOTA 2 - Dove i puntini di sospensione (...) appare in questa tabella, non vi è alcun obbligo.

NOTA 1 - All requirements are maximum unless otherwise indicated.

NOTA 2 - Where an ellipsis (...) appears in this table, there is no requirement.

^A Quando raccordi sono di costruzione saldata, il simbolo di grado e la marcatura sopra indicato deve essere completata con la lettera "W".

^B Raccordi prodotti da barra o piastra può avere carbonio max 0,35.

^C Raccordi a base di forgiati può avere carbonio max 0,35 e 0,35 silicio max sempre minimo.

^D Per ogni riduzione dello 0,01% al di sotto del massimo di carbonio specificato, con un incremento del 0,06% manganese al di sopra del massimo specificato sarà consentito, fino ad un massimo di 1,35%.

^E La somma di rame, nichel, cromo, molibdeno e non supera 1,00%.

^F La somma di cromo e molibdeno non supera 0,32%.

^A When fittings are of welded construction, the grade and marking symbol shown above shall be supplemented by the letter "W".

^B Fittings made from bar or plate may have 0.35 max carbon.

^C Fittings made from forgings may have 0,35 max carbon and 0,35 max silicon with no minimum.

^D For each reduction of 0,01% below the specified carbon maximum, an increase of 0,06% manganese above the specified maximum will be permitted, up to a maximum of 1,35%.

^E The sum of Copper, Nickel, chromium, and Molybdenum shall not exceed 1,00%.

^F The sum of Chromium and Molybdenum shall not exceed 0,32%.

Grado di acciaio Steel grade	Snervamento Yield Strength min. ksi [MPa]	Rottura Tensile Strength min. ksi [MPa]
304, 316	30 [205]	75 [515]
304L, 316L	20 [170]	70 [485]

**LE TOLLERANZE ASME B16.9 SONO RIEPILOGATE NELLE SEGUENTI TABELLE:
TOLERANCES ASME B16.9 ARE SUMMARIZED IN THE FOLLOWING TABLES:**

Tutti i raccordi [Note (1) e (2)] All Fittings [Notes (1) and (2)]				Dimensioni dal centro all'estremità Center-to-End dimensions				Spessore Thickness
Diametro nominale del tubo (NPS) Nominal Pipe Size (NPS)	DN	Diametro esterno allo smusso Outside Diameter at Bevel D*1	Diametro interno all'estremità Inside Diameter at End*2	90° e 45° curve long e short radius e tee 90-deg and 45-deg long and short radius Elbows and tees A, B, C, M	Curve raggio 3D 3D Radius Elbows A, B	Lunghezza generale delle riduzioni e delle cartelle Overall Length of reducers and lap joint stub ends F, H	Lunghezza generale dei fondi Overall length of caps E	Alle estremità At the ends
1/2 to 2 1/2	15-65	+1.6, -0.8	0.8	2	3	2	3	-12,5%
3 to 3 1/2	80-90	1.6	1.6	2	3	2	3	
4	100	1.6	1.6	2	3	2	3	
5 to 8	125-200	+2.4, -1.6	1.6	2	3	2	6	
10 to 18	250-450	+4.0, -3.2	3.2	2	3	2	6	
20 to 24	500-600	+6.4, -4.8	4.8	2	3	2	6	
26 to 30	650-750	+6.4, -4.8	4.8	3	6	5	10	
32 to 48	800-1200	+6.4, -4.8	4.8	5	6	5	10	

NOTE GENERALI / GENERAL NOTES

(a) Tutte le dimensioni sono in millimetri / (a) All dimensions are in millimeters

(b) Le tolleranze sono uguali più o meno eccetto le note / (b) Tolerances are equal plus and minus except as noted

NOTES

(1) Il diametro interno e nominale della parete dello spessore alle estremità deve essere specificato dall'acquirente

(1) The inside diameter and the nominal wall thickness at ends are to be specified by the purchaser

(2) Il minimo spessore della parete del 87,5% è applicato a meno che l'acquirente specifichi una differente tolleranza della parete dello spessore

(2) A minimum wall thickness of 87.5% is applied unless the purchaser specifies a different wall thickness tolerance

(3) L'ovalità è la somma dei valori assoluti delle tolleranze minime e massime

(3) Out-of-round is the sum of absolute values of plus and minus tolerances

(4) Questa tolleranza non può essere applicata ad aree localizzate dei raccordi formati dove è necessario un aumento per soddisfare i requisiti di progetto

(4) This tolerance may not be applied in localized areas of fittings formed where increased wall thickness is required to meet design requirements

(5) Se non diversamente specificato dall'acquirente queste tolleranze applicate al diametro interno nominale, corrispondono alla differenza tra il diametro esterno nominale e il doppio spessore della parete nominale

(5) Unless otherwise specified by the purchaser, these tolerances applied to the nominal inside diameter, correspond to the difference between the nominal outside diameter and twice the nominal wall thickness

*1 (NOTES 3 AND 4) *2 (NOTES 3 AND 5)

CARATTERISTICHE TECNICHE

Ricavate da tubo senza saldatura o saldato.
Norme dimensionali e tolleranze: ASME B16.9 / B16.25
MARCATURA: in accordo ASTM/ASME B16.9 e MSS SP-25
Certificati: EN 10204/3.1

TECHNICAL INFORMATION

Made from seamless pipe or welded.
Dimensional standard and tolerances: ASME B16.9 / B16.25
MARKING: according to ASTM/ASME B16.9 and MSS SP-25
CertificatEs: EN 10204/3.1

RACCORDI A SALDARE EN 10253
BUTT WELDING FITTINGS EN 10253

**INFORMAZIONI GENERALI
GENERAL INFORMATION**

I raccordi a saldare di testa della società Intertubi sono forniti in accordo alle seguenti norme:
Intertubi's butt welding fittings are provided in according to the following standards:

Norma di raccordo Fitting standard	Descrizione Description	Norma del tubo Pipe standard		Grado di acciaio Steel grade	AISI	EN	Tipologia di raccordi Fittings types	Note Notes
		Senza saldature Seamless	Saldato Welded					
EN 10253-3	<p>Accessori per tubi a saldare di testa. Austenitici e austenitico-ferritici (duplex) acciai inossidabili senza requisiti specifici di controllo.</p> <p><i>Butt-welding pipe fittings. Wrought austenitic and austenitic-ferritic (duplex) stainless steel without specific inspection requirements.</i></p>	EN 10216-5	EN 10217-7	X5CrNi18-10 X2CrNi18-9 X5CrNiMo17-12-2 X2CrNiMo17-12-2	304 304L 316 316L	1.4301 1.4307 1.4401 1.4404	<p>Curve (3D, 5D) Riduzioni concentriche ed eccentriche Riduzioni concentriche ed eccentriche "dritte" Tee con derivazione uguale e ridotta Tee sboccati e con prolunga saldata Fondi</p> <p><i>Elbows (3D, 5D) Concentric and eccentric reducers Concentric and eccentric reducers "straight" Equal reducing tee Pulled tee and branch welded tee Caps</i></p>	<p>Non conforme alla PED</p> <p><i>Not according to PED</i></p>
EN 10253-4	<p>Accessori per tubi a saldare di testa. Austenitici e austenitico-ferritici (duplex) acciai inossidabili con requisiti specifici di controllo per impieghi a pressione.</p> <p><i>Butt-welding pipe fittings. Wrought austenitic and austenitic-ferritic (duplex) stainless steel with specific inspection requirements.</i></p>	EN 10216-5	EN 10217-7	X5CrNi18-10 X2CrNi18-9 X5CrNiMo17-12-2 X2CrNiMo17-12-2	304 304L 316 316L	1.4301 1.4307 1.4401 1.4404	<p>Curve (3D, 5D) Riduzioni concentriche ed eccentriche Riduzioni concentriche ed eccentriche "dritte" Tee con derivazione uguale e ridotta Tee sboccati e con prolunga saldata Fondi</p> <p><i>Elbows (3D, 5D) Concentric and eccentric reducers Concentric and eccentric reducers "straight" Equal reducing tee Pulled tee and branch welded tee Caps</i></p>	<p>Conforme alla PED In funzione della resistenza alla pressione i raccordi sono: Raccordi tipo "A" * Raccordi tipo "B" **</p> <p><i>According to PED In function of the resistance to the pressure the fittings are: Fittings type "A" * Fittings type "B" **</i></p>
ISO 5251	<p>Accessori a saldare di testa in acciaio inossidabile.</p> <p><i>Stainless steel butt-welding pipe fittings.</i></p>	EN 10216-5	EN 10217-7	X5CrNi18-10 X2CrNi18-9 X5CrNiMo17-12-2 X2CrNiMo17-12-2	304 304L 316 316L	1.4301 1.4307 1.4401 1.4404	<p>Curve (2D, 3D, 5D) Riduzioni concentriche ed eccentriche Tee con derivazione uguale e ridotta Fondi</p> <p><i>Elbows (2D, 3D, 5D) Concentric and eccentric reducers Equal reducing tee Caps</i></p>	

Le tabelle riportate in seguito permettono un confronto tra i differenti gradi di acciaio secondo la composizione chimica e le proprietà meccaniche:

Tables shown below allow a comparison between the different steel grades according to the chemical composition and mechanical properties:

Grado acciaio / Steel grade	C	Si	Mn	P	S	N	Cr	Cu	Mo	Nb	Ni	Ti	Altri Others

**LE TOLLERANZE, COME DA PAR 11.2 E EN 10253-4, SONO RIEPILOGATE NELLA SEGUENTE TABELLA:
TOLERANCES, AS EXPLAINED IN PAR 11.2 E EN 10253-4, ARE SUMMARIZED IN THE FOLLOWING TABLE:**

Diametro esterno Outside diameter D (mm)	Diametro interno Inside diameter		Ovalità (2) Out of round		Spessore (3) Thickness	F-G-H-L (mm)	B (mm)	C (mm)	K (mm)
	Alle estremità At the ends	Sul corpo On the body	Alle estremità At the ends	Sul corpo On the body	Alle estremità At the ends				
≤114,3	± 1% min ± 0,5 mm (classe D2)	Almeno 80% del diametro interno alle estremità At least 80% of the internal diameter at the ends	Inclusa nella tolleranza del diametro Included in the tolerance of the diameter	Max 4%	-12,5% +15%	±2mm	±7mm	±7mm	±4mm
>=139,7 <=219,1						±2mm	±7mm	±7mm	±7mm
273						±5mm	±7mm	±10mm	±7mm
>=323,9 <=406,4						±5mm	±10mm	±10mm	±7mm
>=457 <=610						±5mm	±10mm	±10mm	±7mm
>=660 <=762						Senza saldatura Seamless -0,35 mm +15%	±5mm	±10mm	±10mm
>762			±10mm	±10mm	±10mm		±10mm		

(1) Le quote F-G-H-L-B-C-K sono riferite alle figure 1-2-3-4-5-6-7-8-9-10-11-12 della EN 10253-4.

(2) L'ovalità deve essere così calcolata $Ov=100(D_{max}-D_{min})/D$ in % dove:

D_{max} = diametro massimo misurato sulla sezione in mm

D_{min} = diametro minimo misurato sulla sezione in mm

D = diametro nominale della sezione in mm

(3) La tolleranza minima si applica anche sul corpo del raccordo

(1) Dimensions are F-G-H-L-B-C-K are referring to the figures 1-2-3-4-5-6-7-8-9-10-11-12 of EN 10253-4.

(2) The out of roundness must be so calculate: $Ov=100(D_{max}-D_{min})/D$ in % where:

D_{max} = maximum diameter measured on the section in mm

D_{min} = minimum diameter measured on the section in mm

D = nominal diameter of section in mm

(3) Minimum tolerance is applied also on the body of the fitting.

TEES UGUALI IDROFORMATI

CARATTERISTICHE TECNICHE

Dimensioni tipo ISO 5251 con altezza del colletto di derivazione più alto come esposto in tabella, tale da permettere la saldatura automatica

Ricavati da tubo saldato

Derivazione lavorata a macchina con spessore costante che permette una saldatura orbitale e perfetta

HYDROFORMED EQUAL TEES

TECHNICAL INFORMATION

Dimensions type ISO 5251 with branch higher as shown in the table, such as to enable the automatic welding

Made from welded pipe

A machined neck with a regular wall thickness enabling a perfect orbital welding

ACCIAIO INOX | STAINLESS STEEL

FLANGE FORGIATE ASME B16.5

FORGED FLANGES B16.5

INFORMAZIONI GENERALI
GENERAL INFORMATION

LE FLANGE A SALDARE ASME B16.5 SONO FORNITE IN ACCORDO ALLE SEGUENTI NORME:
INTERTUBI'S FLANGES ARE PROVIDED IN ACCORDING TO THE FOLLOWING STANDARDS:

Norma di raccordo Fitting standard	Norma Standard	Descrizione Description	Grado di acciaio Steel grade	Tipologia di raccordi Fittings types
ASME B16.5	ASTM/ASME A/SA 403 ASTM A182	Specifiche standard per raccordi di Tubazioni in acciaio inox austenitici Standard Specification for Piping Fittings of stainless steel austenitic Specifiche standard per flange e raccordi forgiati Standard Specification for Forged or Rolled Alloy and Stainless Steel Pipe Flanges, Forged Fittings, and Valves and Parts for High-Temperature	WP304/304L WP316/316L	Flange forgiate Slip-on Flange forgiate Welding neck Flange forgiate Socket welding Flange forgiate Lap joint Flange forgiate Blind

Le tabelle riportate in seguito permettono un confronto tra i differenti gradi di acciaio secondo la composizione chimica e le proprietà meccaniche:

Tables shown below allow a comparison between the different steel grades according to the chemical composition and mechanical properties:

Grado / Grade		Composizione / Composition %							
Grade WP	C	Mn	P	S	Si	Ni	Cr	Mo	Others
WP304	0.08	2.00	0.045	0.030	1.00	8.0 - 11.0	18.0 - 20.0		
WP304L	0.030	2.00	0.045	0.030	1.00	8.0 - 12.0	18.0 - 20.0		
WP316	0.08	2.00	0.045	0.030	1.00	10.0 - 14.0	16.0 - 18.0	2.00 - 3.00	
WP316L	0.030	2.00	0.045	0.030	1.00	10.0 - 14.0	16.0 - 18.0	2.00 - 3.00	

Grado acciaio / Steel grade	Snervamento / Yield Strength min. ksi [MPa]	Rottura / Tensile Streigth min. ksi [MPa]
304, 316	30 [205]	75 [515]
304L, 316L	20 [170]	70 [485]

ACCIAIO INOX | STAINLESS STEEL

FLANGE FORGIATE E CARTELLE EN 1092-1
FORGED FLANGES AND COLLARS EN 1092-1

INFORMAZIONI GENERALI
GENERAL INFORMATION

LE FLANGE DELLA SOCIETÀ INTERTUBI SONO FORNITE IN ACCORDO ALLE SEGUENTI NORME:
INTERTUBI'S FLANGES ARE PROVIDED IN ACCORDING WITH THE FOLLOWINGS STANDARDS:

Norma del raccordo Fitting standard	Descrizione Description	Grado di acciaio Steel grade	AISI	EN	Tipologia di raccordi Fittings types	Note Notes
EN-1092-1	Flange circolari per tubazioni, valvole, raccordi e accessori, designate PN Circular flanges for pipes, velves, fittings and accessories, PN designaed	X5CrNi18-10 X2CrNi18-9 X5CrNiMo17-12-2 X2CrNiMo17-12-2	304 304L 316 316L	1.4301 1.4307 1.4401 1.4404	Flange piane e cieche Flange a collarino Plate and blind flanges Welding-neck flanges	Conforme alla PED According to PED

Le tabelle riportate in seguito permettono un confronto tra i differenti gradi di acciaio secondo la composizione chimica e le proprietà meccaniche:

Tables shown below allow a comparison between the different steel grades according to the chemical composition and mechanical properties:

Designazione dell'acciaio Steel designation		Composizione chimica (analisi di colata) % Chemical composition (heat analysis)									
Designazione simbolica Symbolic designation	Designazione numerica Numerical designation	C	Si max.	Mn max.	P max.	S max.	Cr	Mo	Ni	N	Altri
X2 CrNi18-9	1.4307	≤0,030	1,00	2,00	0,045	0,015	da 17,50 a 19,50	-	da 8,00 a 10,00	0,11 max.	-
X5 CrNi18-10	1.4301	≤0,07	1,00	2,00	0,045	0,015	da 17,00 a 19,50		da 8,00 a 10,50	0,11 max.	-
X5 CrNiMo17-12-2	1.4401	≤0,07	1,00	2,00	0,045	0,015	da 16,50 a 18,50	da 2,00 a 2,50	da 10,00 a 13,00	0,11 max.	-
X2 CrNiMo17-12-2	1.4404	≤0,030	1,00	2,00	0,045	0,015	da 16,50 a 18,50	da 2,00 a 2,50	da 10,00 a 13,00	0,11 max.	-

Designazione dell'acciaio Steel designation		Caratteristiche meccaniche a temperatura ambiente Chemical composition								
Designazione simbolica Symbolic designation	Designazione numerica Numerical designation	Snervamento Yeld point		Rottura Tensile strenght	Allungamento dopo la rottura Elongation after tensile strenght A		Resistenza Impact test			
		0,2% R _{p0,2}	1,0% R _{p1,0}		R	I	tr, t	20°C		196°C
		min. N/mm ²	min. N/mm ²	N/mm ²	(I)			(tr)	(tr)	
X2 CrNi18-9	1.4307	200	230	da 500 a 700	45	35	100	60	60	
X5 CrNi18-10	1.4301	200	230	da 500 a 700	45	35	100	60	60	
X5 CrNiMo17-12-2	1.4401	205	240	da 510 a 710	45	35	100	60	60

VALORI MINIMI UNITARI DI SNERVAMENTO 0,2% (R_{p0,2}) COME DA TABELLA
 MINIMUM UNIT VALUES OF YELD POINT AS SHOWN IN THE TABLES

Designazione dell'acciaio Steel designation		R _{p0,2} min., in N/mm ² , ad una temperatura di: at a temperature of:
Designazione simbolica Symbolic designation	Designazione numerica Numerical designation	100°C
X2 CrNi18-9	1.4307	147
X5 CrNi18-10	1.4301	157
X2 CrNiMo17-12-2	1.4404	166
X5 CrNiMo17-12-2	1.4401	177

TOLLERANZE | TOLERANCES

Dimensione Dimension	Tipo flangia Flange type	Misura Size	Tolleranze / Tolerance mm		
Diametro esterno Outside diameter of neck A D	11	≤ DN 125	+ 3,0	0	
		> DN 125 ≤ DN 1200	+ 4,5	0	
		> DN 1200	+ 6,0	0	
	37	≤ DN 150	± 0,75 % ^a , max. ± 0,3 mm		
		> DN 150	± 1 % ^a , max. ± 3,0 mm		
	Diametro del foro Bore diameter B ₁ , B ₂ , B ₃	01, 02	≤ DN 100	+ 0,5	0
> DN 100 ≤ DN 400			+ 1,0	0	
> DN 400 ≤ DN 600			+ 1,5	0	
> DN 600			+ 3,0	0	
Spessore della parete Wall thickness S ^c	11	≤ DN 100	+ 1,0	+ 2,0	
		> DN 100 ≤ DN 400	+ 1,5	+ 2,5	
		> DN 400	+ 2,0	+ 3,5	
	37	≤ DN 600	- 12,5 % ^a + 15%		
		> DN 600	- 0,5 mm ^a + 15%		
	Diametro esterno Outside diameter D	Tutti gli altri tipi All other types	≤ DN 150	± 2,0	
> DN 150 ≤ DN 500			± 3,0		
> DN 500 ≤ DN 1200			± 5,0		
> DN 1200 ≤ DN 1800			± 7,0		
> DN 1800			± 10,0		

Dimensione <i>Dimension</i>	Tipo flangia <i>Flange type</i>	Misura <i>Size</i>	Tolleranze <i>Tolerance</i> mm	
Diametro del cerchio dei bulloni <i>Diameter of bolt circle</i> K	Tutti i tipi <i>All types</i>	Bolt size M10 to M24	± 1,0	
		Bolt size M27 to M45	± 1,5	
		Bolt size > M45	± 2,0	
Interasse dei fori per bulloni adiacenti <i>Centre-to-centre of adjacent bolt holes</i>	Tutti i tipi <i>All types</i>	Bolt size M10 to M24	± 1,0	
		Bolt size M27 to M45	± 1,5	
		Bolt size > M45	± 2,0	
Lunghezza attraverso il centro <i>Length through hub</i> H ₁ , H ₂ , H ₃ , H ₄ , H ₅	11, 37	≤ DN 80	± 1,5	
		> DN 80 ≤ DN 250	± 2,0	
		> DN 250	± 3,0	
Diametro del colletto <i>Neck diameter</i> N ¹	11 Lavorato sulla superficie di tenuta <i>Machined bearing surface</i>	N1 ≤ 120	0 - 1,0	
		N1 > 120 ≤ 400	0 - 1,2	
		N1 > 400 ≤ 1000	+ 1,6 0	
		N1 > 1000 ≤ 2000	+ 2,5 0	
		N1 > 2000	+ 4,0 0	
		11 Non lavorato sulla superficie di tenuta <i>Un-machined bearing surface</i>	N1 ≤ 120	0 - 1,0
	N1 > 120 ≤ 400		+ 0 - 2,0	
	N1 > 400 ≤ 1000		+ 4,0 0	
	N1 > 1000 ≤ 2000		+ 6,0 0	
	N1 > 2000		+ 8,0 0	
	Spessore flange <i>Flange thickness</i> C ₁ , C ₂ , C ₃ , C ₄		Tutti i tipi (Lavorato su entrambe le facce) <i>All types (Machined on both faces)</i>	≤ 18 mm
		> 18 mm ≤ 50 mm		± 1,5
> 50 mm		± 2,0		
Tutti i tipi (Lavorato solo sul lato anteriore) <i>All types (Machined on front side only)</i>		Tipo 02 e 04 (non lavorati) <i>Type 02 and 04 (un-machined)</i>	≤ 18 mm	+ 2,0 - 1,3
			> 18 mm ≤ 50 mm	+ 4,0 - 1,5
		> 50 mm	+ 7,0 - 2,0	

CARATTERISTICHE TECNICHE

Metodo di fabbricazione: forgiate
Dimensioni-marcatura-tolleranze in accordo
EN 1092-1
ACCIAIO INOSSIDABILE
Certificati: EN 10204/3.1

TECHNICAL INFORMATION

Method of manufacture: forged
Dimensions-marketing-tolerances according
to EN 1092-1
STAINLESS STEEL
CertificatEs: EN 10204/3.1

CODICI UTILIZZATI PER LA DESCRIZIONE DEGLI SWEDGE NIPPLES (nippli ridotti)

P.B.E.	Due estremità lisce	
P.L.E.	Diametro maggiore liscio	
P.S.E.	Diametro inferiore liscio	
B.B.E.	Due estremità smussate	
B.L.E.	Diametro maggiore smussato	
B.S.E.	Diametro inferiore smussato	
T.B.E.	Due estremità filettate	
T.L.E.	Diametro maggiore filettato	
T.S.E.	Diametro inferiore filettato	
B.O.E.	Un'estremità smussata] si applicano solo ai nippli da tubo
P.O.E.	Un'estremità liscia	
T.O.E.	Un'estremità filettata	

Si possono utilizzare due codici per lo stesso pezzo. Esempio: 1 Swage Nipple 3 X 2 BLE/TSE

Dunque:

- DIAMETRO MAGGIORE SMUSSATO
- DIAMETRO MINORE FILETTATO

CODE USED IN MATERIAL LIST OF SWEDGE NIPPLES (reduced nipples)

P.B.E.	Plain both ends	
P.L.E.	Plain large end	
P.S.E.	Plain small end	
B.B.E.	Beveled both ends	
B.L.E.	Beveled large end	
B.S.E.	Beveled small end	
T.B.E.	Threaded both ends	
T.L.E.	Threaded large end	
T.S.E.	Threaded small end	
B.O.E.	Beveled one end] for barrel nipples only
P.O.E.	Plain one end	
T.O.E.	Threaded one end	

Two codes may be used on the same item for example: 1 Swage Nipple 3 X 2 BLE/TSE

Which means:

- BEVELED LARGE END
- THREADED SMALL END

**VALVOLE E FILTRI
VALVES AND STRAINERS**

ART. 621
VALVOLA A SFERA INOX, 2 PEZZI, PASSAGGIO TOTALE

CERTIFICATI EN 10204/2.1

ESECUZIONE SPECIALE: A RICHIESTA FILETTATURA NPT

CARATTERISTICHE TECNICHE

1. Valvola inox passaggio totale, 2 pezzi
2. Filettatura delle estremità gas EN 10226-1 (EX ISO 7-1 e DIN 2999)
3. Acciaio AISI 316 (CF8M)
4. Sede sfera in PTFE + 15% fibra di vetro
5. Stelo anti-espulsione
6. O'ring dello stelo in Viton
7. Guarnizione dello stelo in PTFE
8. Sistema di bloccaggio
9. Pressione massima 63 bar
10. Temperatura d'esercizio - 25 °C + 180 °C

ART. 621
STAINLESS STEEL FULL PORT BALL VALVE, 2 PIECES

CERTIFICATES EN 10204/2.1

SPECIAL EXECUTION: THREADING ON REQUEST NPT

TECHNICAL INFORMATION

1. Stainless steel full port ball valve, 2 pieces
2. Thread ends according gas EN 10226-1 (EX ISO 7-1 e DIN 2999)
3. Made of AISI 316 (CF8M)
4. Ball seats PTFE + 15% G.F.
5. Blow-out proof stem
6. Viton o'ring stem
7. Stem gasket PTFE
8. Locking system
9. Max.. Working pressure bar
10. Working temperature -25 °C + 180 °C

DETTAGLI DELLA ZONA DI TENUTA ALBERO
STEM DETAIL

Molle a tazza / Belleville Washer. Le molle a tazza esercitano una forza costante sulle guarnizioni dell'albero, garantendo una tenuta stagna al variare delle condizioni di esercizio. / Standard belleville washers provide constant "live load" on the stem seals, assuring a tight seal even varying parameters.

Rosetta anti svitamento / Lock Washer. Previene lo svitamento del dado dell'albero quando sottoposto a un elevato ciclo di manovre. / Prevents unthreading of stem nut in high cycle automation applications.

ART. 641

VALVOLA A SFERA INOX, 3 PEZZI, PASSAGGIO TOTALE

CERTIFICATI EN 10204/2.1

ESECUZIONE SPECIALE: A RICHIESTA NPT, BW, SW

CARATTERISTICHE TECNICHE

1. Valvola inox passaggio totale, 3 pezzi
2. Filettatura delle estremità standard gas EN 10226-1 (EX ISO 7-1 e DIN 2999)
3. Acciaio AISI 316 (CF8M)
4. Sede sfera in PTFE + 15% fibra di vetro
5. O'ring dello stelo in Viton
6. Guarnizione dello stelo in PTFE
7. Sistema di bloccaggio
8. Flangia ISO 5211 per montaggio diretto attuatore
9. Stelo anti-espulsione
10. Pressione massima 63 bar
11. Temperatura d'esercizio - 25 °C + 180 °C

ART. 641

STAINLESS STEEL FULL PORT BALL VALVE, 3 PIECES

CERTIFICATES EN 10204/2.1

SPECIAL EXECUTION: ON REQUEST NPT, BW, SW

TECHNICAL INFORMATION

1. Stainless steel full port ball valve, 3 pieces
2. Thread ends according gas EN 10226-1 (EX ISO 7-1 e DIN 2999) standard
3. Made of AISI 316 (CF8M)
4. Ball seats PTFE + 15% G.F.
5. Viton o'ring stem
6. Stem gasket PTFE
7. Locking system
8. Direct mounting actuator ISO 5211
9. Blow-out proof stem.
10. Max.. Working pressure 63 bar
11. Working temperature -25 °C + 180 °C

DETTAGLI DELLA ZONA DI TENUTA ALBERO | STEM DETAIL

Molle a tazza / Belleville Washer. Le molle a tazza esercitano una forza costante sulle guarnizioni dell'albero, garantendo una tenuta stagna al variare delle condizioni di esercizio. / Standard belleville washers provide constant "live load" on the stem seals, assuring a tight seal even varying parameters.

Rosetta anti svitamento / Lock Washer. Previene lo svitamento del dado dell'albero quando sottoposto a un elevato ciclo di manovre. / Prevents unthreading of stem nut in high cycle automation applications.

ART. 528/A
VALVOLA A SFERA ACCIAIO INOSSIDABILE,
PASSAGGIO TOTALE FLANGIATA, ANSI CLASSE 150

CERTIFICATI EN 10204/2.1

CARATTERISTICHE TECNICHE

1. Valvola a sfera passaggio totale, 2 pezzi
2. Estremità flangiata secondo Asme B 16.5 Ansi classe 150
3. Acciaio inox DIN 1.4408 (CF8M)
4. Disegno secondo le normative ASME B16.34
5. Scartamento tra le facce secondo norme ASME B 16.10
6. Sede della sfera in PTFE + 15% Fibra di vetro
7. Guarnizione di tenuta in PTFE
8. Disegno anti-incendio
9. Stelo anti-espulsione
10. Flangia montaggio diretto attuatore secondo ISO 5211
11. Sistema di bloccaggio
12. Dispositivo anti-statico
13. Ispezione e collaudo secondo norme API 598, API 6D
14. Pressione massima 19 bar
15. Temperatura d'esercizio - 30° C + 180 °C

ART. 528/A
STAINLESS STEEL FULL PORT BALL VALVE, FLANGED
ENDS, ANSI CLASS 150

CERTIFICATES EN 10204/2.1

TECHNICAL INFORMATION

1. Full port ball valve, 2 pieces
2. Flanged ends according ASME B 16.5 ANSI Class 150
3. Made of Stainless Steel DIN 1.4408 (CF8M)
4. Design according ASME B16.34
5. Face to Face according ASME B 16.10
6. Ball seats PTFE + 15% G.F.
7. Body seal made by PTFE
8. Fire-safe design
9. Blow-out proof stem
10. Direct mounting actuator according ISO 5211
11. Block System included
12. Anti - static device
13. Inspection & Testing: API 598, API 6 D
14. Max.. Working pressure 19 bar
15. Working Temperature - 30 °C + 180 °C

ART. 402 VALVOLA DI RITEGNO TIPO WAFER, DOPPIO BATTENTE

CERTIFICATI EN 10204/2.1

CARATTERISTICHE TECNICHE

1. Valvola di ritegno doppio battente tipo wafer
2. Acciaio inossidabile in CF8M
3. Battente in CF8M
4. Asta e molla in AISI 316
5. Sede in Viton (FKM) vulcanizzata
6. Montaggio tra le flange DIN EN PN25 | ANSI 150
7. Installazione con flusso verticale, orizzontale o inclinato
8. Scartamento tra le facce secondo EN558-1
9. Pressione massima 25 bar
10. Temperatura massima d'esercizio 180 °C

ART. 402 CHECK VALVE (DOUBLE DISK) WAFER TYPE

CERTIFICATES EN 10204/2.1

TECHNICAL INFORMATION

1. Wafer check valve (double disk)
2. Made of stainless steel CF8M
3. Disk made of CF8M
4. Axle and spring made of AISI 316
5. Seat of viton (FKM) vulcanised in groove
6. Assembly between flanges DIN EN PN25 | ANSI 150
7. Installed with vertical horizontal or inclined flow
8. Face to face according EN 558-1
9. Max working pressurer 25 bar
10. Max. Working temperature 180 °C

**ART. 406
VALVOLA DI RITEGNO A CLAPET TIPO WAFER**

CERTIFICATI EN 10204/2.1

CARATTERISTICHE TECNICHE

1. Valvola di ritegno a clapet tipo wafer
2. Acciaio inossidabile AISI 316
3. O'ring esterno in viton (FKM)
4. O'ring del battente in Viton (FKM)
5. Montaggio tra le flange DIN EN PN10/16 ANSI150
6. (Eccetto DN40 solo DIN) Installazione con flusso verticale o orizzontale
7. Pressione massima 16 bar
8. Temperatura massima d'esercizio -20°C / +180 °C
9. Basse perdite di carico

**ART. 406
CHECK VALVE (SINGLE DISK) WAFER TYPE**

CERTIFICATES EN 10204/2.1

TECHNICAL INFORMATION

1. Wafer check valve (single disk)
2. Made of stainless steel AISI 316
3. External o'ring made of viton (FKM)
4. Disk o'ring made of viton (FKM)
5. Assembly between flanges DIN EN PN10/16 ANSI150
6. (Except DN40 only DIN) Installed with vertical or horizontal flow
7. Max working pressure 16 bar
8. Max working temperature -20°C / +180 °C
9. Low head losses

**ART. 415
VALVOLA DI RITEGNO A DISCO TIPO WAFER**

CERTIFICATI EN 10204/2.1

CARATTERISTICHE TECNICHE

1. Valvola di ritegno a Disco tipo Wafer
2. Corpo in acciaio inox AISI 316
3. Disco in acciaio inox AISI 316
4. Molla in acciaio inox AISI 316
5. Dimensioni ridotte
6. Montaggio tra flange DIN EN PN 10/16/40 e ANSI 150/300
7. Installazione Orizzontale, Verticale o Inclinata
8. Scartamento secondo EN 558-1 S.49
9. Pressione di esercizio massima 40/25 bar
10. Bassa perdita di carico
11. Tempertura di esercizio $-20^{\circ}\text{C} / +240^{\circ}\text{C}$

**ART. 415
WAFER DISK CHECK VALVE**

CERTIFICATES EN 10204/2.1

TECHNICAL INFORMATION

1. Wafer check valve (single disk).
2. Made of Stainlees Steel AISI 316
3. Disk made of AISI 316
4. Spring made of AISI 316
5. Little dimensions
6. Assembly between flanges DIN EN PN 10/16/40 and ANSI 150/300
7. Installed with vertical, horizontal or inclined flow
8. Face to Face according EN 558-1 S.49
9. Max. Working pressure 40/25 bar
10. Low head losses
11. Working Temperature $-20^{\circ}\text{C} / +240^{\circ}\text{C}$

ART. 430
VALVOLA DI RITEGNO A CLAPET FILETTATA

CERTIFICATI EN 10204/2.1

CARATTERISTICHE TECNICHE

1. Valvola di ritegno a clapet filettata
2. Acciaio inossidabile Aisi 316
3. Estremità filettate secondo EN 10226-1 (EX ISO 7-1 e DIN 2999)
4. Pressione massima 16 Kg/cm²
5. Temperatura massima d'esercizio 180 °C

ART. 430
SWING CHECK VALVE, THREADED ENDS

CERTIFICATES EN 10204/2.1

TECHNICAL INFORMATION

1. Swing check valve
2. Made by stainless steel Aisi 316
3. Threaded ends according EN 10226-1 (EX ISO 7-1 e DIN 2999)
4. Max. Working pressure 16 Kg / cm²
5. Max. working temperature 180 °C

VALVOLA A SPILLO A VIA DIRITTA

3000 PSI

CERTIFICATI EN 10204/2.1

ESECUZIONE SPECIALE: NPT

CARATTERISTICHE TECNICHE

1. Valvola a spillo via diritta
2. Acciaio Inox ASTM A182 F316
3. Filetto estremità secondo EN 10226-1 (EX ISO 7-1 e DIN 2999) gas
4. Premistoppa in PTFE + Grafite
5. Pressione massima di lavoro 3000 Lbs.
6. Limiti pressione / Temperatura:
 - 1/4" - 1/2" = 3000 PSI / 260°C
 - 3/4" - 1 1/4" = 3000 PSI / 240°C
 - 1 1/2" - 2" = 3000 PSI / 200°C

ART. 223
NEEDLE VALVES

3000 PSI

CERTIFICATES EN 10204/2.1

SPECIAL EXECUTION: NPT

TECHNICAL INFORMATION

1. Needle valve
2. Made of Stainless steel ASTM A182 F316
3. Threaded ends according EN 10226-1 (EX ISO 7-1 e DIN 2999) gas
4. Stem Packing PTFE + Graphite
5. Max. Working pressure 3000 Lbs.
6. Pressure / Temperature Range:
 - 1/4" - 1/2" = 3000 PSI / 260°C
 - 3/4" - 1 1/4" = 3000 PSI / 240°C
 - 1 1/2" - 2" = 3000 PSI / 200°C

VALORE di Kv / Kv VALUES

Kv = Quantità metri cubi per ora che passa attraverso valvola generando una perdita di carico in bar.

Kv = Flow rate of water in cubic meter per hour that will generate a pressure drop of 1 bar across the valve.

Med./Size	1/4"	3/8"	1/2"	3/4"	1"	1 1/4"	1 1/2"	2"
m³/h	0.25	0.36	0.47	0.95	1.1	1.6	4.76	5.36

**ART. 230
VALVOLA A GLOBO FILETTATA**

CERTIFICATI EN 10204/2.1

CARATTERISTICHE TECNICHE

1. Valvola a globo
2. Corpo in Acciaio AISI 316 CF8M
3. Otturatore in AISI 316
4. Estremità filettate secondo nome EN 10226-1 (EX ISO 7-1 e DIN 2999)
5. Premistoppa in PTFE
6. Pressione massima di esercizio 16 bar
7. Temperatura massima di esercizio: 180C°

**ART. 230
TTHREADED ENDS GLOBE VALVES**

CERTIFICATES EN 10204/2.1

TECHNICAL INFORMATION

1. Globe valve
2. Made of Stainless steel CF8M
3. Compact disc made of S. Steel 316
4. Threaded ends according EN 10226-1 (EX ISO 7-1 e DIN 2999)
5. Stem packing PTFE
6. Max working pressure 16 bar
7. Max working temperature: 180C°
